## OBJECTIVE

The world is driven by data and so is every business. With the data and digital revolution come the challenges to maintaining the integrity of the systems which are prone to breach of data privacy & protection. The humungous quantity of data handled is not unique to IT and ITES entities. Each and every business regardless of size operates on one or the other digital platform. Consequently they may become targets for malware or ransom ware besides breach of firewalls. There is also the possibility of breach within when theft of sensitive and confidential data occurs jeopardising the enterprise immeasurably. A Gartner Report, published earlier this year, predicts that data will become central to corporate strategy and data would become a critical asset not just from a business point of view but also as an integral part of the governance obligations of the Boards.

## BY ATTENDING THIS WEBINAR

- Understand the techniques that will help highlight the value of Data Protection, Privacy & Cyber Security in Boardroom conversations.
- Understand the reputational and financial risks if data is not being managed or monitored adequately
- How enterprises gear up to the challenges of ransom ware, malware and other forms of cyber attacks.
- Learn how to drive the culture shift to embrace digital technology from the top down
- Emerging Trends of GDPR and the future of Data Privacy.
