The title '**The Cyber-Elephant in the Boardroom**' shows why **protecting a company's** data should be top of mind for C-suites and corporate boards. With the innovative **5 Pillars of Security Framework**, any **C-level executive** can understand their organisation's cyber risk and the steps they need to take to protect their information.

The five pillars the book enumerates are physical security, people security, data security, infrastructure security, and crisis management. Putting these in place can assist an organisation in mitigating its risks both from technological and legal perspectives. The core of the book focuses on understanding how data works in your organisation and placing controls around it. Since data is the lifeblood of an organisation, a lack of control over your data is a significant risk.

Security and risk are indeed the cyber-elephants in the boardroom. It is far too late to pretend they are not there. The book provides readers with a high-level methodology of what they need to do to secure their organisations.

There's a Cyber-Elephant in the Boardroom and it needs to be addressed!

It a must read for **Cyber & Risk Management Professionals**, as well as any Business and Boardroom Leader, helping them strategise for good cyber hygiene. ■

## ABOUT THE AUTHOR:

**Mr. Mathieu Gorge** is the CEO and Founder of VigiTrust, providing Integrated Risk Management (IRM) SaaS solutions to clients in 120 countries across various industries. Mr. Gorge helps CEOs, CXOs, and boards of directors handle cyber accountability challenges through good cyber hygiene and proactive cybersecurity compliance programs.
